B A N G A L O R E • I N D I A

## Declaration

I hereby declare that the summer internship project report on **Gokaldas Exports Unit-4 Bommanahalli, Bangalore** has been undertaken by me for the award of Master of Business Administration degree. I have completed this study under the guidance of Prof. SASKEEKALA.

I also declare that this summer internship project report has not been submitted for the award of any Degree, Diploma, Associateship, Fellowship or any other title, in CHRIST (Deemed to be University) or in any other university.

Place: Bengaluru

Date: 26.05.2025

Signature\_\_\_\_\_

SANJAYNARAYANAN

2428728

**CHRIST**  
(DEEMED TO BE UNIVERSITY)  
BANGALORE • INDIA

## Certificate

This is to certify that the summer internship project report submitted by SANJAYNARAYANAN is a record of work done by her during the year 2025 under my guidance and supervision in partial fulfillment of the requirements of Master of Business Administration degree.

Place: Bengaluru

Date: 26.05.2025

Signature\_\_\_\_\_

Prof. SASEEKALA

MBA Programmed

School of Business and Management

CHRIST (Deemed to be University)

Bangalore

# Acknowledgement

I am indebted to all the people who helped me accomplish this summer internship project successfully.

First, I thank the Vice Chancellor Dr Fr Abraham VM, CHRIST (Deemed to be University), Bangalore, for giving me the opportunity to do my project.

I thank Dr.Jain Mathew, Dean, Dr.GeorgyKurien, Associate Dean(Main Campus), Dr.Jeevananda S, Associate Dean (Kengeri Campus), Prof.Sirish V, Head (Main Campus), Prof. Krishna MC, Head (Kengeri Campus), of MBA programme, School of Business and Management, CHRIST (Deemed to be University),Bengaluru, for their kind support.

I thank Prof. Padmanabhan for his support and guidance during my training. I remember him with much gratitude for his patience and motivation, but for which I could not have submitted this work.

I wish to express my sincere thanks to my corporate mentor, **Mr. RAVI (I.E), GOKALDAS EXPORTS UNIT -4**, for giving me an opportunity to work under his guidance and successfully complete my training.

I thank my parents for their blessings and constant support, without which this training would not have seen the light of day.

## **INDEX**

| Chapter No. | <b>TABLE OF CONTENTS</b>     | Page No. |
|-------------|------------------------------|----------|
| 1           | INTRODUCTION TO ORGANIZATION | 1        |
| 2           | ORGANIZATION STRUCTURE       | 8        |
| 3           | WEEKLY FUNCTIONAL EXPOSURE   | 10       |
| 4           | CONCLUSION                   | 15       |

## **CHAPTER 1**

# **INTRODUCTION TO ORGANIZATION**

## **HISTORY OF ORGANIZATION**

### **GOKALDAS EXPORTS:**

#### **1. HISTORY OF THE ORGANIZATION:**

Gokaldas Exports Ltd., established in the year 1979, is a big as well as a prominent name in India for garment manufacturing and export. Having its units in Bengaluru, Karnataka and few in Tamil Nadu. It is the Second Largest Garment export company in India. The company was established with the aim to turn India into a global player in the apparel supply chain. From a modest garment unit in its infancy, it has become a multi-unit group with overseas presence, exporting some of the world's top fashion and lifestyle brands.

#### **Leadership and Vision**

Sivaramakrishnan Ganapathi is at the helm of Gokaldas Exports as the Vice-Chairman and Managing Director. With more than three decades of international experience in Asia, North America, and Europe, Mr. Ganapathi has guided the company towards steady growth and modernization. His vision focuses on sustainability, technological upgradation, and employee empowerment, making Gokaldas a choice partner for leading global apparel brands.

#### **FIGURE 1: GOKALDAS EXPORTS LOGO**

Initially, Gokaldas Exports focused on producing good quality clothing, timely delivery, and a long-term relationship with the customer. It had a small international and local clientele initially but kept on developing its infrastructure and manufacturing base. A point of change in the company was the public issue when it had broader access to finances as well as further fuelling its development.

Gokaldas Exports currently has more than 35 factories spread all over India and employs more than 48,000 people, most of whom are women. This, besides being a testament to the organization's focus on empowerment and diversity, is also a testament to the organization's focus on sustainability and ethics. It produces more than 90 million pieces of apparel annually and ships them to more than 50 countries in North America, Europe, Asia, South America, and Africa.

Gokaldas Exports has, over the years, always conditioned itself to suit the changing demands of the global apparel industry by investing in advanced technology, widening its product profiles fashionwear, activewear, outerwear, and bottom wear and forging strategic relationships with globally respected customers.

In the recent past, the company has also carried out strategic buyouts to complement its ability. Specifically, in 2023, Gokaldas Exports acquired Matrix Clothing, a well-known garment manufacturer of performance and outdoor wear. Through this takeover, the company further enhanced its capability, customer base, and expertise in high-value segments and continued its mission to be an empanelled global partner in high-fashion manufacturing.

Financially, the company has done tremendously well, with revenues exceeding ₹2,400 crore in FY 2023-24 and a market capitalization of over ₹5,500 crore. Such triumph is a testament to Gokaldas Exports' strength and strategic know-how in the face of a highly competitive world environment.

### **Clientele and Worldwide Presence**

Gokaldas Exports has a prestigious and varied clientele, working with famous international fashion and retail companies. Some of its major clients are Adidas, H&M, Puma, and Levi's, to name a few. These partnerships underscore the company's reputation for delivering high-quality garments that meet international standards.

## FIGURE 2: GE's MAJOR CLIENTELE

The company's products reach over 50 countries, with significant markets in North America, Europe, and Asia. This extensive global footprint reflects Gokaldas Exports' ability to adapt to diverse market demands and maintain strong international relationships.

Briefly, Gokaldas Exports Ltd. is now the very essence of Indian entrepreneurship in world textiles—grounded in tradition, spurred by innovation, and committed to sustainable growth and inclusion.

### 1.2 VISION AND MISSION:

#### **Vision Statement:**

Gokaldas Exports Ltd. aspires to be a globally reputed apparel manufacturer, evoking distinctive recognition for its products, performance, processes, and people.

#### **Mission Statement:**

The company's mission is to achieve profitable growth through innovation, quality, consistency, and commitment. □ cite □ turn0search10 □ □

#### **Core Values:**

Gokaldas Exports Ltd. is guided by a set of core values that shape its operations and corporate culture:

- **Innovation:** Continuously embracing new ideas and technologies to enhance product offerings and operational efficiency. □
- **Quality:** Maintaining high standards in product manufacturing to ensure customer satisfaction and brand loyalty.
- **Consistency:** Delivering reliable and uniform products and services across all operations. □
- **Commitment:** Demonstrating dedication to stakeholders, including customers, employees, and the broader community.

### 1.3 PROFILE OF PRODUCT:

Gokaldas Exports Ltd. offers a comprehensive and diverse product portfolio, catering to a global clientele with a wide range of apparel products. Their offerings encompass various categories, ensuring they meet the dynamic demands of the fashion industry.

#### **Product Categories:**

- **Fashion Wear:** Contemporary apparel designed to align with current fashion trends.
- **Outerwear:** Includes jackets, coats, and other garments suitable for various weather conditions.
- **Bottom wear:** A range of trousers, jeans, and skirts crafted for comfort and style.
- **Casualwear:** Everyday clothing that combines ease with aesthetic appeal.
- **Sportswear:** Performance-oriented attire designed for athletic and leisure activities.

These categories are tailored for men, women, and children, ensuring a broad market reach.

#### **Value-Added Services:**

Gokaldas Exports enhances its product offerings with a suite of value-added services, including: □

- **Embroidery:** Intricate designs to add uniqueness to garments.
- **Printing:** High-quality prints to meet diverse design requirements.
- **Quilting & Polywadding:** Techniques to provide warmth and texture.
- **Laundry Services:** Ensuring garments meet specific finish standards.
- **Laser Applications:** Precision detailing for modern designs.
- **Denim Services:** Specialized treatments to produce various denim finishes.

These services allow the company to offer customized solutions, catering to specific client needs.

### **Manufacturing Capabilities:**

With over 35 manufacturing units, Gokaldas Exports boasts a production capacity exceeding 90 million garments annually. Their operations are supported by integrated ancillary units, ensuring efficiency and quality control throughout the production process.

#### **1.4 Products:**

Gokaldas Exports Ltd. offers a diverse range of apparel products catering to global fashion brands. Their product portfolio includes

- **Casual Wear:** T-shirts, polos, shorts, and jeans
- **Formal Wear:** Shirts, trousers, suits, and dresses
- **Specialty Fabrics:** Embroidered textiles, printed fabrics, and sustainable materials.

#### **1.5 Services:**

Beyond manufacturing, Gokaldas Exports provides value-added services to enhance their product offering.

- **Embroidery:** Intricate designs to add uniqueness to garment.
- **Printing** High-quality prints to meet diverse design requirement.
- **Quilting & Polywadding:** Techniques to provide warmth and texture.
- **Laundry Services:** Ensuring garments meet specific finish standard.
- **Laser Applications:** Precision detailing for modern design.
- **Denim Services:** Specialized treatments to produce various denim finished.

## 1.6 Objectives:

Gokaldas Exports has set clear objectives to guide its growth and operational excellence.

- **Quality Commitment:** Maintain high-quality standards to reduce return rates and increase customer satisfaction.
- **Customer Satisfaction:** Achieve a customer satisfaction rate of 95% and increase repeat orders.
- **Sustainable Practices:** Reduce water consumption by 20% and achieve 40% renewable energy usage in operations by 224.

## 1.5 Strategies:

To achieve its objectives, Gokaldas Exports employs several strategic initiatives:

- **Strategic Acquisition:** Acquired Atraco and Matrix Clothing Private Limited to expand product offerings and market Reach.
- **Capacity Expansion:** Commissioned new manufacturing units in Bhopal and Perineuria to increase production capabilities.
- **Sustainability Initiative:** Committed to using 100% certified organic cotton and reducing carbon emissions by 50% by 2030. b
- **Innovation and R&D:** Invests approximately INR 50 crore annually in research and development to enhance productivity and product quality.
- **Global Market Expansion:** Aims to expand its market reach to 25 countries globally by 2024.

## **CHAPTER 2**

# **ORGANIZATIONAL STRUCTURE**

## ORGANIZATION CHART- DESIGN AND STRUCTURE

Gokaldas Exports Ltd. follows a hierarchical and departmentalized organizational structure that facilitates coordination across diverse business functions such as Industrial Engineering, Production, Merchandising, Human Resources, and Business Analytics. This structure promotes specialization and clarity in roles and responsibilities.

The factory unit is headed by a General Manager who oversees all departments. Each department is headed by a senior manager and supported by assistant managers, supervisors, and line staff. This ensures smooth communication and accountability. The I.E department operates closest to the production lines and acts as a bridge between planning and execution. Merchandising serves as the communication link between the buyers and internal teams, ensuring the order is completed as per specifications and timelines. Business Analytics, a relatively modern function in the company, supports these departments through insightful data tracking and visualizations.

The organizational structure allows for focused operational execution while encouraging cross-functional teamwork to achieve production and quality goals. Regular inter-department meetings, planning sessions, and review cycles help synchronize the activities across the supply chain.

The **physical layout** of the factory is designed to support a streamlined workflow. The key operational areas within the factory include:

- **Fabric Storage Area:**

This is the initial receiving point where bulk fabric is delivered and unloaded. The fabric undergoes a preliminary inspection for defects, shade variations, and quality standards before being accepted. Each fabric roll is tagged and coded for traceability. The area is organized with clearly labeled racks and zones to differentiate between incoming, inspected, and approved fabric. Fabrics are stored in a way that ensures ease of access and efficient flow toward the cutting department. Proper ventilation and handling practices are followed to maintain fabric quality. Inventory is tracked digitally for accuracy. This area forms the backbone of the raw material supply to production.

- **Trims Store:**

This dedicated area stores all accessory components used in garment construction, including buttons, zippers, threads, interlinings, labels, and tags. These trims are received and segregated based on type, size, color, and style requirements for specific orders. Proper labeling and shelf arrangement make retrieval efficient during the production cycle. Stock is tracked digitally and replenished based on order volume. The trims are issued to the stitching floor according to production schedules. Quality checks are done upon receipt to avoid production issues..

- **Cutting Section:**

The cutting section transforms bulk fabric into components for garment assembly. Using CAD marker plans, fabric is laid in layers and either manually or automatically cut. Automated cutting machines improve precision and reduce material wastage. Cut panels are bundled with tags containing order and size details. The section works closely with the planning and I.E. teams to ensure output aligns with production targets. This stage is vital to avoid bottlenecks and supports productivity through accuracy. Safety measures and quality checkpoints are in place to ensure efficient operations.

- **Stitching Section:**

This section is the backbone of garment assembly. Bundled cut pieces are fed into a line of operations where each workstation performs specific tasks (like collar attachment, sleeve joining, etc.). The line layout is optimized based on line balancing principles to maintain smooth flow and reduce idle time. Operators' performance is monitored using output tracking and quality audit systems. Supervisors ensure timely completion of hourly targets. I.E. teams review daily performance metrics to refine line efficiency and worker allocation..

- **Quality Checking Section:**

The quality checking section is a critical checkpoint between stitching, finishing, and packing. Garments are inspected at multiple stages, including in-line (during stitching) and end-line (post-stitching) inspections. Quality checkers evaluate stitching accuracy, garment measurements, fabric defects, label placement, and overall aesthetics. AQL (Acceptable Quality Limit) standards are used to determine sampling procedures. Any defective garment is immediately tagged and sent for repair or rework. Detailed defect records are maintained to identify recurring issues and improve line performance. This section works closely with the I.E and production teams to ensure that customer quality expectations are met. Final quality audits are conducted before garments move to the packing section to avoid shipment rejections.

- **Finishing Section:**

After stitching, garments move to finishing for thread trimming, spot cleaning, ironing, and final inspection. Each piece is checked against buyer standards to ensure compliance. Ironing is done using steam presses and vacuum tables for proper finishing. Rejected pieces are sent for rework with documented issues. Garments are measured for accuracy and aligned in size-wise bundles. Final touches like label placement and quality stamping are completed here. This section determines final product readiness. Quality control teams ensure garments are 100% inspected before packing.

- **Packing Area:**

This is the last stage before dispatch. Garments that pass final inspection are tagged with size and style stickers and folded uniformly. Polybags or tissue paper are used for individual packing based on buyer requirement. Bundles are packed into cartons with packing lists. Each carton is labeled with style, quantity, and barcode for tracking. The packing area is organized by buyer order and shipment schedule. This section ensures garments are protected during transit and meet presentation standards. All packing operations follow standard operating procedures (SOPs) for accuracy and consistency.

**CHAPTER 3**

**WEEKLY FUNCTIONAL EXPOSURE**

## **WEEKLY FUNCTIONAL EXPOSURE:**

### **1. INTRODUCTION**

During the course of my internship at **Gokaldas Exports Unit 4, Bommanahalli, Bangalore**, I was primarily assigned to the **Industrial Engineering (I.E.) department**, with additional learning exposure to the **Merchandising** and **Business Analytics** teams. The internship provided a structured and insightful understanding of various functions that contribute to the smooth operation of a large-scale garment manufacturing unit.

### **Week 1-2: SAM Calculation, Time Study, Line Balancing:**

In the first two weeks, I was introduced to the fundamentals of Industrial Engineering. I learned how to calculate SAM (Standard Allowed Minutes), which is crucial for determining garment costing and setting realistic production targets. I assisted in conducting time studies to capture and analyze operation times, which helped identify delays and scope for standardization. Additionally, I supported line balancing exercises to ensure equitable distribution of work across operators, thereby enhancing line efficiency and reducing idle time.

Where:

- Observed Time = Time recorded during time study
  - Performance Rating = Worker's efficiency rating (in %)
  - Allowances typically range from 10–20%
  - **Timestudy:**  
Conducted using stopwatch or video analysis to record the time taken for each operation. Data collected was analyzed to identify non-value-added activities and improve cycle time.
  - **LineBalancing:**  
Aimed at distributing tasks evenly across operators to reduce bottlenecks and idle time.
- Formula for Line Efficiency:**

$$\text{Line Efficiency(\%)} = \frac{\text{Total SAM Produced}}{\text{Number of Operators} \times \text{Working Hours} \times 60} \times 100$$

## **Week 3–4: Skill Matrix Creation, Work-Study, Target vs Output Analysis:**

The focus during these weeks was on evaluating operator capabilities and shop floor performance. I developed a skill matrix for various sewing operations, which helped in identifying multiskilled operators and planning workforce allocation. I also participated in work-study observations to understand motion economy and ergonomic improvements. Furthermore, I was involved in analyzing daily target vs. actual output, identifying root causes for variances such as absenteeism, breakdowns, or quality issues.

- **Skill Matrix Creation:**

Created a matrix showing each operator's proficiency across various operations. This helped in identifying multiskilled workers and effective operator allocation.

- **Work-Study:**

Applied methods to study existing work processes and identify unnecessary motions using motion economy principles. Suggested ergonomic improvements and standardized best methods.

- **Target vs Output Analysis:**

Studied production data to compare the planned targets versus actual output and analyzed reasons for deviation.

### **Daily Target Formula:**

$$\text{Target} = \frac{\text{Working Minutes per Day} \times \text{Number of Operators} \times \text{Line Efficiency (\%)}}{\text{SAM}}$$

### **Gap Analysis:**

$$\text{Target-Output Gap} = \text{Planned Output} - \text{Actual Output}$$

## **Week 5-6: Working with I.E. Senior Manager on Production Planning and Performance Improvement:**

Under the guidance of the Senior Manager – I.E., I was given hands-on exposure to production planning techniques. I assisted in creating daily and weekly production schedules considering style complexity, machine availability, and shipment timelines. We also worked on improving operator efficiency by analyzing real-time data and implementing corrective actions. I gained exposure to methods of continuous improvement such as lean manufacturing tools and productivity enhancement strategies.

- **Production Planning:**

Learned how to plan production based on order quantity, line capacity, style complexity, and delivery dates.

**Capacity Formula:**

$$\text{Daily Capacity} = \frac{\text{Working Hours per Day} \times \text{Number of Machines} \times \text{Machine Efficiency}}{\text{SAM}}$$

- **Performance Improvement Initiatives:**

Assisted in analyzing operator performance, identifying low-performing areas, and proposing improvements such as workstation redesign and operator training.

**Operator Efficiency Formula:**

$$\text{Efficiency (\%)} = \frac{\text{Total SAM Produced}}{\text{Total Time Worked (in minutes)}} \times 100$$

Also explored incentive schemes and their impact on motivation and performance.

## **Week 7: Exposure to Merchandising and Business Analytics:**

In the final week, I was given the opportunity to interact with departments beyond I.E. In Merchandising, I learned about pre-production processes such as sample development, BOM (Bill of Materials) creation, order confirmations, and buyer communications. I also observed costing methods and follow-up processes. Simultaneously, I spent time with the Business Analytics team where I explored how data is collected, visualized, and used in dashboards to track KPIs like efficiency, WIP (Work-In-Progress), and style performance. This gave me a broader perspective on how data-driven decision-making supports operations.

- **Merchandising Exposure:**

Observed pre-production processes:

- Costing using material and labor inputs
- Bill of Materials (BOM) generation
- Sample approvals and buyer coordination
- Order follow-ups and production tracking

**Costing Formula (Simplified):**

**Garment Cost = Fabric Cost + Trims Cost + CM (Cost of Making) + Overheads + Profit Margin**

- **Business Analytics Exposure:**

Worked with data dashboards used for tracking KPIs such as:

- Line efficiency
- Operator performance
- Style-wise output
- WIP (Work-in-Progress) levels

Explored tools like Excel and Power BI to generate dashboards and reports for management review. Learned how data analytics supports real-time decisions and long-term strategy.

## **CHAPTER 4**

# **CONCLUSION**

## **Conclusion:**

The internship at Gokaldas Exports Unit 4, Bommanahalli, Bangalore, under the Industrial Engineering (I.E.) department, was a highly enriching and practical learning experience. Over the span of seven weeks, I was exposed to the real-world applications of industrial engineering concepts such as SAM calculation, time study, line balancing, production planning, and performance analysis. I developed a deeper understanding of how theoretical knowledge is applied to improve efficiency, optimize resources, and maintain high-quality production standards in a competitive garment manufacturing environment.

Additionally, the interaction with Merchandising and Business Analytics departments provided a holistic view of the garment production life cycle—from pre-production planning to post-production data analysis. Exposure to tools like skill matrices, KPI dashboards, and costing frameworks helped broaden my perspective on cross-functional coordination and data-driven decision-making.

Working under the guidance of experienced professionals, especially the I.E. Senior Manager, enabled me to grasp industry best practices, standard operating procedures, and improvement techniques that directly impact productivity and profitability. The experience has significantly enhanced my analytical, observational, and problem-solving skills, and has equipped me with the practical knowledge required to step into the apparel industry with confidence.

This internship not only helped bridge the gap between academics and industry but also strengthened my interest in pursuing a career in industrial engineering and operations management within the textile and apparel sector.
